Dmitry Shamal

Senior Frontend Developer

Saint Petersburg, Russia · digr98@gmail.com · Telegram: @no_sugar_daddy · dsham.me

PROFILE

Frontend developer with 7+ years of commercial experience. I specialize in React, TypeScript and complex interface architecture. I build web applications and Telegram Mini Apps, from marketplaces and trading products to gaming platforms. I build products from scratch, evolve existing systems and review code. I use AI tools (Claude Code, OpenAI Codex) for code analysis, finding bottlenecks and fixing bugs.

TECHNICAL SKILLS

Frontend: JavaScript, TypeScript, React, Next.js, Vite, HTML5, CSS3, SCSS, CSS Modules, Tailwind CSS
State and data: Zustand, Redux Toolkit, TanStack Query, REST API, WebSocket
Architecture and UI: component architecture, UI Kit, Storybook, SSR, SEO, mobile-first, render optimization
Web3 and Telegram: Telegram Mini Apps, Telegram Bot API, TON, TonConnect, NFT, smart contract integration
Backend: NestJS, Python (aiogram), PostgreSQL (basic), SQLite, Go (reading and understanding code)
Infrastructure: Git, GitHub, GitHub Actions (CI/CD), Docker, Vercel, DigitalOcean
AI tools: Claude Code, OpenAI Codex (code analysis, finding bottlenecks, bug fixes, features); Pen.dev (interface design)

PROFESSIONAL EXPERIENCE

Open Builders – Senior Frontend Developer — May 2024 – Present

Telegram Mini Apps in the TON ecosystem for a large audience. Depending on the project, frontend technical lead or sole frontend developer, responsible for architecture, implementation and product development.

- Initiated and built a React/TypeScript UI Kit: reusable components, theming, Storybook and npm distribution; introduced it into Collab Tool. github.com/OpenBuilders/ui-kit-public
- Built the frontend of several applications from scratch: architecture, interfaces and state management. In high-traffic products, moved part of the logic to the client to reduce server load.
- Reviewed code and colleagues' technical decisions; worked in a team on large products under tight deadlines.
- Reworked applications as business models changed; integrated TON wallets and smart contracts, including direct on-chain interactions without a backend API.
- Built the Telegram Tools ecosystem landing page.

Key projects:

- **Sticker Pack** – a marketplace for limited-edition digital sticker packs in Telegram, issued as NFTs on TON. Developed and reworked collection launches, sales mechanics, purchases, transfers and minting, including direct TON interactions without a backend API. t.me/sticker_bot
- **Not Games** – a Telegram gaming platform from the creators of Notcoin: shared player profile, achievements, cross-game inventory and an internal marketplace. Developed achievements, items, marketplace features and profile customization in a team. t.me/notgames_bot
- **Void Game** – a multiplayer game on Not Games (React, WebSocket). Took over the frontend as the sole developer, refined game mechanics, optimized rendering and launched a new season. t.me/VoidNotHereBot
- **Access Tool** – an open-source service controlling access to private Telegram groups and channels through digital assets. Built the entire frontend. github.com/OpenBuilders/access-tool
- **Earn** – an application for token distribution campaigns. Built the entire frontend. t.me/earn
- **Community** – a task and campaign platform connecting projects and users in Telegram and TON. Added new task types, paid tasks, navigation and filtering, and redesigned the interface.

ORCA.codes – Middle Frontend Developer (part-time) — Nov 2023 – Mar 2024

- Built the interfaces and product functionality of a dental equipment marketplace from scratch.

PIK Digital – Middle Frontend Developer — May 2021 – May 2024

Large real estate platform for finding, comparing and buying homes (pik.ru). React, Next.js, TypeScript, Redux.

- Contributed to the pik.ru redesign; built an interactive property map with search and filters.
- Updated the online mortgage calculator to support new subsidized interest rates and purchase terms.
- Configured server-side rendering (SSR) and contributed to SEO improvements; the website reached the top 3 for target search queries.

GELSTER – Web Developer Jul 2019 – May 2021

- Sole developer on the team: built the corporate website for product selection and purchase enquiries, redesigned the existing site and built a tool for sales managers to prepare commercial proposals.

PERSONAL PROJECTS

- **ShareAny** – Telegram bot that turns links to Reels, Shorts and posts into native video or photos in any chat (inline mode). Python, aiogram, yt-dlp; SQLite cache of Telegram file_id for instant resends, per-user rate limiting, Docker, auto-deploy via GitHub Actions with a healthcheck. t.me/shareany_bot
- **Vecherly** – AI recommendations for films, series and videos across platforms: search by title, ask the AI assistant or get a random pick. React, TypeScript, Go, PWA. vecherly.online

EDUCATION AND LANGUAGES

Saint Petersburg State University of Aerospace Instrumentation (SUAI) 2015 – 2019

Institute of Information Systems and Information Security; Infocommunication Technologies and Communication Systems.

Russian – native · English – B1, technical documentation
