DMITRY SHAMAL

Senior Frontend Developer

Saint Petersburg · digr98@gmail.com · Telegram: @no_sugar_daddy

PROFILE

Frontend developer with 7+ years of commercial experience. I specialize in React, TypeScript and complex interface architecture. I develop web applications and Telegram Mini Apps, from marketplaces and trading products to gaming platforms. I build products from scratch, evolve existing systems and review code. I use AI tools (Claude Code, OpenAI Codex) for code analysis, finding bottlenecks and fixing bugs.

TECHNICAL SKILLS

Frontend: JavaScript, TypeScript, React, Next.js, Vite, HTML5, CSS3, SCSS, CSS Modules, Tailwind CSS
State and data: Zustand, Redux Toolkit, TanStack Query, REST API
Architecture and UI: component architecture, UI Kit, Storybook, mobile-first
Backend: NestJS, PostgreSQL (basic knowledge), Go (reading and understanding code)
Web3 and Telegram: Telegram Mini Apps, TON, TonConnect, NFT, smart contract integration
AI tools: Claude Code, OpenAI Codex (code analysis, finding bottlenecks, bug fixes, small features); Pen.dev (interface design)
Infrastructure: Git, GitHub, Vercel, DigitalOcean App Platform

PROFESSIONAL EXPERIENCE

Open Builders - Senior Frontend Developer

May 2024 - Present

Telegram Mini Apps for a large audience. Depending on the project, I acted as frontend technical lead or sole frontend developer, responsible for architecture, implementation and product development.

- Initiated and built a React/TypeScript UI Kit: reusable components, theming, Storybook and npm distribution; introduced it into Collab Tool. GitHub · Collab Tool
- Independently built the frontend of several applications from scratch: architecture, interfaces and state management. In high-traffic products, moved some logic to the client to reduce server load.
- Reviewed code and colleagues' technical decisions; worked in a team on large products under tight deadlines.
- Reworked applications as business models changed; integrated TON, wallets and smart contracts.
- Built the Telegram Tools ecosystem landing page. GitHub

Key projects:

- **Sticker Pack** - a marketplace for limited-edition digital sticker packs in Telegram, issued as NFTs on TON. Developed and reworked collection launches, sales mechanics, purchases, transfers and minting, including direct TON interactions without a backend API. Telegram
- **Not Games** - a Telegram gaming platform from the creators of Notcoin, with a shared player profile, achievements, inventory across games and an internal marketplace. Worked in a team on achievements, items, marketplace features and profile customization. Telegram
- **Void Game** - a multiplayer game on Not Games. Became the sole frontend developer after the team left; continued development, refined game mechanics and launched a new season. Telegram
- **Access Tool** - an open-source service controlling access to private Telegram groups and channels through digital assets. Independently built the entire frontend. Telegram · GitHub
- **Earn** - an application for token distribution campaigns. Independently built the entire frontend. Telegram
- **Community** - a task and campaign platform connecting projects and users in Telegram and TON. Added new task types, paid tasks, navigation and filtering, and redesigned the interface.

ORCA.codes - Middle Frontend Developer (part-time)

Nov 2023 - Mar 2024

- Built the interfaces and product functionality of a dental equipment marketplace from scratch.

PIK Digital - Middle Frontend Developer

May 2021 - May 2024

- Developed a large web application for finding, choosing and buying real estate.
- Built an interactive property map with search and filters, and a purchase terms calculator.
- Contributed to SEO improvements for a product that reached the top 3 for target search queries.

GELSTER - Web Developer

Jul 2019 - May 2021

- Independently built the corporate website and an application for automating commercial proposals; maintained internal web tools.
