Dmitry Shamal

Senior Frontend Developer · React, TypeScript, Telegram Mini Apps

Saint Petersburg, Russia (UTC+3) · Remote, office or relocation · digr98@gmail.com · Telegram: @no_sugar_daddy · dsham.me

PROFILE

Frontend developer with 7+ years of commercial experience in React and TypeScript. Built Telegram Mini Apps with up to 200–300k weekly active users, including an NFT sticker marketplace that handled 10,000+ purchases per second at collection launches. Take products from architecture to release, work in small teams with cross-review, and go beyond the frontend when needed: BFF on NestJS and Go, Python bots, Docker and CI/CD. Use AI tools (Claude Code, OpenAI Codex) daily for code analysis, debugging and feature work. Open to frontend, Telegram/Web3 and AI-assisted fullstack roles.

TECHNICAL SKILLS

Frontend: JavaScript, TypeScript, React, Next.js, Vite, HTML5, CSS3, SCSS, CSS Modules, Tailwind CSS
State and data: Zustand, Redux Toolkit, TanStack Query, REST API, WebSocket
Architecture and UI: component architecture, micro-frontends, shared npm packages, UI Kit, Storybook, SSR, SEO, mobile-first
Web3 and Telegram: Telegram Mini Apps, Telegram Bot API, TON, TonConnect, NFT, smart contract integration
Backend: NestJS, BFF, Python (aiogram), PostgreSQL (basic), SQLite, Go (reading and understanding code)
Infrastructure: Git, GitHub, GitLab, CI/CD (GitHub Actions), Docker, Sentry, Vercel, DigitalOcean
AI tools: Claude Code, OpenAI Codex (code analysis, finding bottlenecks, bug fixes, features); Pen.dev (interface design)

PROFESSIONAL EXPERIENCE

Open Builders – Senior Frontend Developer — May 2024 – Present

Telegram Mini Apps in the TON ecosystem with up to 200–300k weekly active users (Telegram WAU). Frontend lead in teams of 2–3 frontend developers or sole frontend developer, depending on the product.

- Built the frontend of several applications from scratch: architecture, interfaces and state management; shipped under tight deadlines for scheduled public launches.
- Moved load-heavy logic to the client when backend capacity was limited: in Earn, real-time per-second reward calculation based on leaderboard position and wallet token balance.
- Integrated TON wallets and smart contracts, including direct on-chain interactions without a backend API.
- Reviewed merge requests within the frontend team; reworked applications as business models changed.
- Worked with the Not Games BFF and its migration from NestJS to Go. Used CI pipelines and Sentry error monitoring in day-to-day delivery.
- Initiated a React/TypeScript UI Kit with theming and Storybook, published as an npm package and adopted in Collab Tool. github.com/OpenBuilders/ui-kit-public

Key projects:

- **Sticker Pack** – NFT sticker marketplace in Telegram, up to 200–300k weekly active users. 40+ collections from major partners and 100+ from users, about 50 of them minted as NFTs on TON. Built timed collection launches, sales mechanics, purchases, transfers, minting and burning; launches peaked at 10,000+ purchases per second, with 5,000–10,000 stickers selling out in 10–30 seconds. t.me/sticker_bot
- **Not Games** – Telegram gaming platform from the creators of Notcoin, up to 200–300k weekly active users: shared player profile, achievements, cross-game inventory and an internal marketplace. Developed achievements, items, marketplace and profile customization. t.me/notgames_bot
- **Earn** – token distribution campaigns, ~100k users. Built the entire frontend, including real-time reward calculation on the client. t.me/earn
- **Void Game** – multiplayer game on Not Games (React, WebSocket). Took over the frontend as the sole developer and launched a new season: skins, new rewards and new game modes. t.me/VoidNotHereBot
- **Access Tool** – open-source service controlling access to private Telegram groups and channels through digital assets. Built the entire frontend. github.com/OpenBuilders/access-tool
- **Community** – task and campaign platform connecting projects and users in Telegram and TON. Added new task types, paid tasks, navigation and filtering, and redesigned the interface.

ORCA.codes – Middle Frontend Developer (part-time) — Nov 2023 – Mar 2024

- Built the interfaces and product functionality of a dental equipment marketplace from scratch.

PIK Digital – Middle Frontend Developer May 2021 – May 2024

Large real estate platform for finding, comparing and buying homes (pik.ru); frontend team of 5–6. React, Next.js, TypeScript, Redux.

- Contributed to the pik.ru redesign; developed the interactive property map across all residential complexes with search, filters and layers for infrastructure and nearby places.
- Extracted the mortgage calculator and the property map into shared npm packages and micro-frontends reused across several repositories.
- Updated the mortgage calculator to support new subsidized interest rates and purchase terms.
- Configured server-side rendering (SSR) and contributed to SEO improvements; pik.ru reached and held the top 3 for target search queries for the first time.

GELSTER – Web Developer Jul 2019 – May 2021

- Sole developer: built the corporate website for product selection and purchase enquiries and redesigned the existing site.
- Built a commercial proposal tool that let sales managers prepare proposals during the call with a client instead of afterwards.

PERSONAL PROJECTS

- **ShareAny** – Telegram bot that turns links to Reels, Shorts and posts into native video or photos in any chat (inline mode). Python, aiogram, yt-dlp; SQLite cache of Telegram file_id for instant resends, per-user rate limiting, Docker, auto-deploy via GitHub Actions with a healthcheck. Built with Claude Code. t.me/shareany_bot
- **Vecherly** – AI recommendations for films, series and videos across platforms: search by title, ask the AI assistant or get a random pick. React, TypeScript, Go, PWA. vecherly.online

EDUCATION AND LANGUAGES

Saint Petersburg State University of Aerospace Instrumentation (SUAI) 2015 – 2019

Institute of Information Systems and Information Security; Infocommunication Technologies and Communication Systems.

Russian – native · English – B1, working proficiency: written communication, calls, technical documentation
